

POOLHEATER

with built-in flow switch

1.0 DESCRIPTION

Spa Heaters are intended for use on spas or hot tubs having a forced water circulation system.

The water flow through the heater should be at least 15 GPM but should not exceed 80 GPM. Higher flow may damage the heater.

2.0 INSTALLATION

WARNING

Only qualified personnel, as defined by National Electrical Code Article 100, should install and maintain this equipment. Unauthorized alteration or improper maintenance of this unit may release the manufacturer from any warranty claims. The installation must be in accordance with the instructions in this manual and applicable local plumbing and electrical codes.

CHECK ELECTRICAL CONNECTIONS TO ALL COMPONENTS within the heater for tightness. These can become loose during shipment and handling.

2.1 Physical Placement

The Spa Heater is suitable for indoor or outdoor installation. See Figure 1 for piping connections and Figures 2A and 2B for electrical connections. The heater should be securely mounted to a smooth, flat surface. It may be conveniently located next to the filtration equipment. Leave minimum clearance of 9 inches on the left, 12 inches both above and to the front and 6 inches on the back for service entrances and access.

2.2 Electrical Installation

CAUTION

The electrical installation must be in accordance with Article 680 of the National Electrical Code, and ANSI/NFPA 70.

The electrical supply power must be single phase, 2 wire, 240 VAC. The supply must be protected by a circuit breaker or a fused disconnect switch. An insulated ground conductor must be provided. See Figures 2A and 2B and Table 1 for supply wire and circuit sizing. A lug has been provided for attachment for the BONDING wire per the National Electric Code, 1996 Edition, Article 680-22, (a) (4). This lug is located between the inlet and outlet pipes of the heater.

OPERATION

1. Connect water and electricity, and must test again.
2. Turn the water valve off, switch on main power. FLOW will light up on thermostat.
3. Turn the thermostat on, indicator light both left and right side will light up, then knob the thermostat between 30°C-65°C. ELEMENT lights up means warming finishing.

REQUIREMENT

1. Voltage: alternating voltage:240/380V AC
2. Frequency: 50Hz
3. Current: refer to ampere meter on nameplate
4. Power Switch: adopt high-quality Three-phase four-wire active power filters
Quadropole Leakage switch, Two-phase Leakage switch
5. Thermostat: safely connect the earth wire.

- ① POWER
- ② SCREEN
- ③ TIME
- ④ TEMPERATURE
- ⑤ MINUS
- ⑥ PLUS

OPERATION

1. Get water and electricity through, also must need to be tested.
2. Press "ON" on the power switch to open machine, and temperature inside machine will be showed rapidly on screen.
3. If to adjust temperature of water, press④first, then press ⑤or ⑥to need. Temperature range (30°C-65°C).
4. If to adjust press ③ first, then press ⑤or ⑥to need.(1-15hours)

REQUIREMENT

1. Voltage: alternating voltage:240/380V AC
2. Frequency: 50Hz
3. Current: refer to ampere meter on nameplate
4. Power Switch: adopt high-quality Three-phase four-wire active power filters Quadropole Leakage switch, Two-phase Leakage switch
5. Thermostat: safely connect the earth wire.

FLOW SWITCH
 2. SEE INSTRUCTION MANUAL FOR COMPONENT IDENTIFICATION.
 3. ALL WIRING TO BE 105°C INSULATED, MINIMUM CONTROL CIRCUIT WIRING: 14 AWG POWER CIRCUIT WIRING, AS NOTED
